

Congestion Management Policy

In order to ensure that Horizon Networks' connection and operation standards are met, we may curtail and/or interrupt distributed generation that is connected to our network. However, we may only do so in accordance with this policy.

Distributed generation connected to Horizon Networks' network may be interrupted and/or curtailed from time to time:

- a) if we reasonably consider it necessary to protect or maintain our network, or for worker safety;
- b) if you modify the distributed generation without obtaining our prior written consent and the modification has a material effect on the injection of electricity from the distributed generation into our network; or
- c) if we are required to do so by law, regulation or an obligation imposed on Horizon Networks which could affect the operation of the distributed generation.

We do not have any known location that are currently subjected to export constraints or expected to become subject to export congestion within the next 12 months.
